SOLUSI REVIEW UTBK 2019 FISIKA 1

1. Jawaban: E

Benda diam

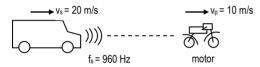

$$\sum F_Y = 0$$

$$N = mg + F \sin 60$$

$$= 20 + 5\sqrt{3}$$

$$=5(4+\sqrt{3})$$

2. Jawaban: D

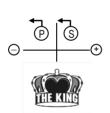

Dari konsep efek Doppler

$$\frac{fp}{v - v_p} = \frac{fs}{v - v_s}$$

$$\frac{fp}{340 - 10} = \frac{fs}{340 - 20}$$

$$f_p = \left(\frac{330}{320}\right)960 = 990 \text{ Hz}$$

3. Jawaban: C

- Saat pegas ditarik muncul Energi Potensial pegas di A(E_{p_A} E_{p_A} $E_p = \frac{1}{2}$ k.a²)
- Saat pegas merapat/tertekan E_K berubah menjadi energi potensial pegas di B $\left(E_{P_B} = \frac{1}{2} k.b^2\right)$

Dari konsep hukum kekekalan energi:

$$\Rightarrow$$
 Untuk lantai licin maka berlaku $E_{P_a} = E_K = E_{P_a}$

$$\frac{1}{2}k.a^2 = \frac{1}{2}k.b^2$$

$$a = b$$

⇒ Untuk lantai kasar maka berlaku

$$E_{P_{\!\scriptscriptstyle A}} \, = W_{ges} + \, E_{P_{\!\scriptscriptstyle b}}$$

$$\frac{1}{2} k.a^{2} = \underbrace{\mu.mg(a+b)}_{\substack{\text{energi hilang} \\ \text{karena gesekan}}} + \frac{1}{2} k.b^{2}$$

4. Jawaban: E

Dari gerak parabola

$$X_{\text{max}} = \frac{v_0^2 \sin 2\alpha}{g} = \frac{10.(2 \sin 53 \cos 53)}{10}$$
$$= \frac{100.\left(2.\frac{8}{10}.\frac{6}{8}\right)}{10} = 9.6 \text{ m}$$

5. Jawaban: A

1

Cermin datar sifat bayangan: Maya, tegak, sama besar, dibelakang cermin.
